

Outline

- About Fortinet company and products.
- How to build the course lab from scratch step-by-step

Hardware Device and ports

- Installation and initial configuration
- System settings (host name, System Time, Password Policy.....)
- Inspection Modes
- NGFW Modes
- Basic configuration
- Managing admin password and profiles
- Reset admin lost password.
- Administrator profiles
- Understand and configure interface types: Aggregate Interfaces Redundant interfaces Redundant interfaces - VLAN interface - Software Switch interface
- Zone configuration
- DHCP service configuration
- DNS services configuration
- Managing objects
- Firewall local database
- Managing guest user
- Captive portal
- Routing
- Static Routing
- Dynamic Routing OSPF, RIP, BGP Policy routing
- Back up, Restore firewall configuration
- Upgrade, downgrade the firmware
- NAT Understanding NAT
- Static NAT
- Dynamic NAP PAT
- **Publishing servers**
- **Access Policy**

Outline

- Web Filtering
- SSL decryption and inspection What is encryption and decryption! How SSL works! Differences between SSL and IPSec! - How SSL traffic can be decrypted!
- Antivirus
- IPS inspection
- Application Filtering
- DNS Filter
- DoS protection
- Integration with active directory
- Virtual Private Network (VPN)
- What is VPN! and why used!
- How VPN works in general!
- VPN types!
- Deploying Site to Site VPN!
- Deploying Remote Access VPN!
- Traffic shaping
- Endpoint Control
- DLP (Data Leak Prevention)
- High Availability A/P (Active/Passive)
- A/A (Active/Active)
- **SNMP**
- Packet capture
- **SDWAN**
- Redundant Internet with SD-WAN
- Passive authentication
- Logging and monitoring
